C24 Bank System

Program Description

This program is a banking management system that handles data for clients, employees, and admins using TXT files. It allows you to clear data for each type individually or all at once, and provides interactive menus to manage operations.

How to Run

Important: The program depends on .txt data files. They MUST be in the same directory as the EXE or the system will show file-not-found errors.

- Place BankSystem.exe in the same folder as the required data files: Clients.txt Employees.txt Admins.txt Any other files the system uses

- Double-click the EXE file and the system will start immediately.

Login Requirements

When starting the program, it will ask for:

- Username

- Password

Both must be between 8 and 20 characters.

Admin Account

Admin accounts cannot be created from inside the program. They must be added manually to the Admins.txt file.

How to Add a New Admin:

01	02	03
Open Admins.txt	Add a line in this format: AdminID,AdminName,AdminPassword,AdminSalary	Open AdminLastID.txt Change the value from 3000 to 3001

Example: 3001,SuperAdmin,SuperPass123,5000

Ready-to-Use Admin Example

Admins.txt: 3001,MainAdmin,AdminPass123,6000

AdminLastID.txt: 3001

Notes

- The program runs through the console only.

- If a file error appears, it means one of the TXT files is missing from the EXE folder.

- Do not delete or rename data files unless necessary.

Thank you for using C24 Bank System!
